

The new G2 series

Honeywell

G2 ALARM CONTROL PANELS RANGE, BUILT ON GALAXY TECHNOLOGY

High technology, simple delivery

The new G2 series

Built on Galaxy Technology

At Honeywell we have your security in mind

With expertise in every area of security, we provide discreet, hi-technology, integrated security solutions. We are one of the world's largest security manufacturers and understand your need to keep your people, premises, assets and intellectual property safe and secure.

Our solutions are developed according to the concept of 'integration by design'. By this we mean that integration is not an afterthought and products are not simply 'connected'. Instead, from the very beginning of the development process, we listen to our customers, and ensure that our world class security products are designed from the ground up to function seamlessly as an integrated security management system.

Honeywell's upgraded G2 security system offers small and medium size commercial installations reduced risk and improved, customised asset protection through its unique flexible system architecture.

This straightforward system is based on our tried and tested Galaxy technology, the most advanced solution for commercial security. This new G2 system meets regulations required for police monitored systems and is designed to be simple to install, maintain and control.

How will your business benefit from the new G2 system?

Simple to install and manage, tailored to your needs

A Perfect fit with your needs

Honeywell continuous training ensures our security installation partners have all the tools they need to optimise your system from conception through to installation.

Subtle installation footprint

The new G2 series is ideal for installation in specialised spaces or where wired connection is an aesthetical issue. This is possible due to the new compact design of the G2, coupled with the use of wireless peripherals and the GSM network. The new slim-line wireless door contact also contributes to a discreet security system.

Up to three alarm systems in one

In a multiple system environment such as landlord/tenant installations, the G2 system provides you with a flexible, cost-effective system which can operate as up to three independent subsystems in addition to a common area.

High end security at your control

Flexible communication network connections

G2 innovating technology supports multi-path signalling by utilising telephone, mobile(1) and internet networks. This improves system security by offering increased alarm signal success in the event of a land-line failure. This means that our system can connect in different ways for alarm signalling, remote servicing and can be managed from an alternative location.

Secure wireless technology

A 2-way key fob allows you to control and verify the status of your system anytime, from both inside and outside the building.

With our unique radio technology, the G2 is protected from being triggered by false radio communication as each time that the system is set, the keyfob transmits a unique signal to the panel.

Managed Access Control for any size of business

For additional protection for high value areas, a cost effective door control access restriction feature can be integrated and programmed into your security system. Its simplicity of use also allows simultaneous access and setting/unsetting, using authorised cards without the need for a code.

Your choice of response

G2 supports instant alarm signalling used to trigger police response. Your monitoring centre can be given immediate listen-in capability following an alarm to verify a genuine intrusion has occurred. You can also receive SMS alerts providing low cost monitoring direct to your mobile.

The best service for you

We know you like easy solutions, the G2, as most of the Honeywell control panels, has remote routine inspection capability allowing your installation company to carry out routine maintenance from their location saving you time and adding convenience. Welcome to the G2 experience!

G2 features

- 12 Zones on board as standard (up to 44 (*))
- On board modem dialler as standard
- Remote Routine inspection capability
- Support for Ethernet module
- Support for GSM module (*)
- 2-way RF Portal supports range of bi directional Wireless peripherals
- Groups/partitions with programmable keypads to split system operation
- Supports badge reader
- Support 2-way voice devices (*)
- Compact metal case
